
Sandeep Kumar

Salesforce & Heroku Architect | Full Stack Developer

Salesforce and Heroku architect with 16+ years of enterprise delivery and a decade on the Salesforce platform. Co-founder of CloudAlgo, where I have scoped, architected and shipped 70+ projects for non-profits, healthcare and life-sciences organisations, retailers, manufacturers and enterprise software companies. I take an engagement from a rough brief to a running system: data model, integrations, Lightning UI, Heroku services, CI/CD, and the code review that keeps it maintainable after I hand it over.

Co-Founder / Salesforce & Heroku Architect

Jan 2022 – Present

CloudAlgo · Jaipur, India

- Co-founded CloudAlgo in 2022 and grew it from zero into a Salesforce consulting practice that has delivered 70+ projects for clients across North America, Europe and Asia
 - Architect and technical lead on every engagement: data modelling, Apex and Lightning Web Components, Heroku services, MuleSoft and MuleSoft RPA, REST/SOAP integrations with ERP, NetSuite, EMR and identity systems, and Airflow data pipelines on AWS, with Lambda and Fargate services behind API Gateway and Cognito for customer-facing identity
 - Recent deliveries include an Airflow medallion pipeline that cut CRM-to-ERP data latency from a 12 to 24 hour batch to under 15 minutes, a MuleSoft layer giving a diagnostics platform 5-minute logistics visibility, and Salesforce-NetSuite integration that ended manual order re-keying
 - Own delivery end to end — discovery workshops, scoping and estimation, sprint planning, client communication, release and hypercare — so clients deal with one accountable person from brief to go-live
 - Built Salesforce DX and GitHub Actions CI/CD pipelines with scratch-org validation and automated test runs, replacing manual change sets and cutting deployment risk on every release
 - Still hands-on: write production code daily, review every pull request, and set the security, quality and architecture standards the whole team follows
 - Mentor developers and consultants on platform patterns, from governor-limit-safe Apex to reusable LWC component design
-

Platform Architect

Traction On Demand · Remote

Jun 2019 – Dec 2021

- Led development of Traction REC, a Salesforce-native recreation management product used by parks and recreation departments for memberships, programme registration, facility bookings, fundraising and community engagement
 - Designed and built greenfield product components end to end: custom objects and sharing model, Apex services, Lightning UI, and packaging for distribution across customer orgs
 - Built and led a distributed Agile team across time zones; set the sprint cadence, code review standards and release workflow the team still runs on
 - Technical Architect and Node.js lead for Traction X-Ray, an org-analysis tool: built metadata scanners, analytics processing, and automated PDF and Google Sheets reports that show architects exactly where the technical debt in a Salesforce org sits
-

Technical Architect | Principal Consultant

Appirio · Jaipur, India

Dec 2013 – Jun 2019

- Principal Consultant and Technical Architect on 8+ concurrent enterprise engagements over five and a half years at a global Salesforce SI, spanning pharma, retail, med-tech and enterprise software
 - Rebuilt LillyNow, Eli Lilly's employee intranet, replacing 80+ disparate portals with one Node.js / React / Contentful platform on Heroku serving 40,000 employees in 120 countries
 - Sole developer on the BMC MyEBC iOS app: owned design, Swift development, QA and App Store release, backed by a Salesforce Community
 - Led mobile delivery for Lids (React Native, iOS and Android) and Nightingale Conant (Ionic/Cordova), and built the Heroku microservices that connect each app to its legacy backend
 - Delivered enterprise integrations including a bidirectional Office 365–Salesforce calendar sync for Align Technology's global sales team and an IBM Watson-powered feedback analysis platform for Mesh01
 - Ran technical discovery and solution design with client architects, turning requirements into estimates, architecture documents and delivery plans
-

Senior Software Engineer

Metacube Private Limited · Jaipur, India

May 2012 – Dec 2013

- Built the Aegerion Pharmaceuticals patient portal on Salesforce Communities, where external patients track LDL-C levels and dietary plans in a responsive UI on phone and desktop
- Implemented Experian's Service Cloud: web-to-case and email-to-case, assignment and escalation rules, and Knowledge One so agents resolve cases from one console
- Delivered Edgeforce, Teva Pharmaceutical's social intranet, giving 40,000+ employees document access and collaboration on mobile, iPad and desktop
- Built Logitech's B:C Service Cloud case management system with a Customer Community, working consistently across iPad, desktop and iPhone

Software Engineer

Xtreme Infosoft Private Limited · Jaipur, India

Feb 2010 – May 2012

- Developed a Sales Rep Application for Delta Electronics India (ASP.NET, SQL Server, jQuery) that let field reps configure and present products with clients on site and route approved orders straight to production
- Built a College Automation System (ASP.NET, SQL Server, jQuery) covering fee management, student performance tracking, staff administration and reporting

PROJECTS

Traction REC

TRACTION ON DEMAND

Recreation management product built natively on Salesforce for parks and recreation departments. Residents register for programmes, book facilities and manage memberships; staff run everything from one org with standard Salesforce reporting. I designed the data model and sharing, built the Apex services and Lightning UI, and packaged it for distribution across customer orgs.

Salesforce

Apex

Lightning Components

Visualforce

Traction X-Ray

TRACTION ON DEMAND

Org health and metadata analysis tool for Salesforce architects. Scanners crawl an org through the Metadata API, score the depth and breadth of customisation, and generate PDF and Google Sheets reports that turn technical debt into a prioritised list. Built as a Node.js service with Apex-side collectors.

Salesforce

Apex

Metadata API

Google Sheets API

LillyNow Portal

ELI LILLY (VIA APPIRIO)

Eli Lilly's employee intranet, rebuilt to replace 80+ separate portals with one platform for 40,000 employees across 120 countries. Node.js and React on Heroku, Contentful for editorial content, Kaltura for video. Editors publish once; employees get one search, one navigation and one login.

Node.js

React.js

Contentful

Kaltura REST API

Heroku

Lids Mobile App

LIDS (VIA APPIRIO)

Shopping app for North America's largest headwear retailer: browsing, checkout and the Access Pass loyalty programme on iOS and Android from one React Native codebase. I built the Heroku microservices that bridge the legacy commerce backend to the mobile front end, so the app shipped without re-platforming the backend.

React Native

iOS

Android

Heroku

Node.js

Microservices

Align Technology Calendar Integration

ALIGN TECHNOLOGY (VIA APPIRIO)

Bidirectional calendar sync between Office 365 and Salesforce for Align Technology's global sales team. Meetings created or changed in either system propagate automatically, so reps stop double-entering and managers see real field activity in Salesforce.

Salesforce

Office 365

REST API

Node.js

Mesh01

MESH01 (VIA APPIRIO)

Product testing platform where brands launch campaigns, recruit testers and collect structured feedback. IBM Watson runs sentiment analysis over free-text responses and reporting dashboards surface the results. Node.js, AngularJS and MongoDB on Heroku.

Node.js

AngularJS

MongoDB

IBM Watson

Heroku

BMC MyEBC

BMC SOFTWARE (VIA APPIRIO)

iOS app for BMC executives and customers to book enterprise briefings and product demos, backed by a Salesforce Community. Delivered solo as the single point of contact: design, Swift development, QA and App Store submission.

iOS

Swift

Salesforce Community

Edgeforce Social Intranet

TEVA PHARMACEUTICAL (VIA METACUBE)

Social intranet for Teva's 40,000+ employees: document libraries, Chatter collaboration and news, working the same way on desktop, iPad and phone. Built on Salesforce so IT got one platform to secure and one identity to manage instead of a separate intranet stack.

Salesforce

Chatter

Visualforce

Responsive UI

Logitech B:C Service Cloud

LOGITECH (VIA METACUBE)

Case management for Logitech's business customers: a Customer Community where partners raise and track cases, and a Service Cloud console where agents work them. Designed to behave identically on iPad, desktop and iPhone so field and desk staff share one process.

Service Cloud

Customer Community

Apex

Visualforce

Experian Service Cloud

EXPERIAN (VIA METACUBE)

Service Cloud implementation for Experian's support team: web-to-case and email-to-case intake, assignment and escalation rules, and Knowledge One so agents answer from one console. Cases reach the right queue automatically and agents stop switching between tools to resolve them.

Service Cloud

Knowledge

Web-to-Case

Email-to-Case

Aegerion Patient Portal

AEGERION PHARMACEUTICALS (VIA METACUBE)

Patient portal on Salesforce Communities for a rare-disease pharma company. Patients log in as external users, track their LDL-C levels over time and follow the diet plan set for them, on phone or desktop. Built with the sharing model and field-level security that patient data requires.

Salesforce

Communities

Visualforce

Responsive UI

LUCID Shared Modules

ELI LILLY (VIA APPIRIO)

Set of private Node.js modules for Lilly's internal projects: SSO authentication wrapped in one package, PDF generation from Markdown documents, and shared security helpers. Each new project pulled the modules in instead of rebuilding the same plumbing, cutting weeks from setup.

Node.js

SSO

Markdown

PDF

Nightingale Conant App

NIGHTINGALE CONANT (VIA APPIRIO)

Hybrid iOS and Android app for a motivational-training publisher. Members buy a subscription, stream video courses through Kaltura, and read or purchase books, all from one Ionic codebase backed by Node.js services.

Ionic

Cordova

AngularJS

Node.js

Kaltura

Travel Companion

IBM (VIA APPIRIO)

Single-page AngularJS travel companion built for IBM's retail clients: responsive UI components, Google Maps integration for store and route discovery, and Node.js with MongoDB behind it.

AngularJS

Node.js

MongoDB

Google Maps API

Holos

KIMBERLY-CLARK (VIA APPIRIO)

Mobile-optimised web application built from a blank page for Kimberly-Clark. I owned the full stack: project planning and wireframes with the client, SQL Server schema design, .NET REST services, and the AngularJS front end with responsive HTML and CSS so the same app worked on phone, tablet and desktop. Delivered as the sole full-stack developer on a small Appirio team.

.NET SQL Server AngularJS
REST APIs Responsive UI

Sales Rep Application

DELTA ELECTRONICS INDIA (VIA XTREME INFOSOFT)

On-site build at Delta's Gurgaon office: a web app that let field sales reps present products, configure them to a customer's requirements and send the approved configuration straight to production for order fulfilment.

ASP.NET SQL Server jQuery

INTERESTS

I keep current by reading platform release notes and building small things with new tooling before a client needs it. Off the keyboard: tabletop gaming, video games and travel.
